

Software Requirements Specification (SRS)

Yoga E-commerce Website

Version 1.0

Purpose: A basic e-commerce platform for selling yoga-related products, with a customer-facing storefront and a full-access administrator dashboard.

1. Introduction

1.1 Purpose

The purpose of this project is to develop a basic e-commerce website for selling yoga-related products online. Customers can browse products, view product details, add products to a shopping cart, and purchase products either as guests or through customer accounts created by the administrator.

1.2 Project Scope

The system consists of two primary parts: (1) the customer-facing e-commerce website and (2) the admin dashboard. The customer website will use the previously provided e-commerce template as the UI/design foundation. V1 focuses on core e-commerce functionality and excludes advanced features such as product variants, reviews, and wishlists.

2. User Roles

2.1 Guest Customer

- Browse products and view product details.
- Add products to cart and purchase without an account.
- Provide name, email, phone number, and address at checkout.
- Provide payment information through the selected payment gateway.
- Place an order as a guest; the order is associated with the customer's email address.

2.2 Registered Customer

- Customer accounts cannot be self-created.
- Admin creates the account using customer name, email, and password.
- Customer can log in, view orders, track order status, and make purchases.
- Customer can also purchase as a guest using the same email address.

2.3 Administrator

There will be one Admin role with full access to the admin dashboard. No separate staff, manager, or super-admin roles are required in V1.

3. Customer Website

3.1 Homepage

- Use the provided e-commerce template as the visual foundation.
- Provide branding, navigation, product sections, categories, cart access, and customer login access as applicable to the template.

4. Product Management

4.1 Product Listing

- Display available products.
- Browse products by category.
- Show product image, name, and price.
- Open a product detail page.

4.2 Product Details

- Product name, images, description, price, available stock, and category.
- Add to Cart and Buy Now actions.

4.3 Admin Product Management

- Create, edit, and delete products.
- Upload and manage product images.
- Set name, description, price, stock quantity, and category.
- Activate/deactivate products.

4.4 Product Variants

Product variants are not required in V1. Each product has a single configuration and price.

5. Shopping Cart

- Cart data is stored only in browser Local Storage.
- Guests do not have a persistent server-side cart.
- Customers can add products, change quantities, remove products, view subtotal, shipping, and total, and proceed to checkout.
- Product availability and pricing should be validated when the order is submitted.

6. Buy Now

Customers can purchase a product directly from its product detail page using Buy Now, which takes them directly to checkout for the selected product.

7. Checkout

7.1 Customer Information

Checkout will collect full name, email address, phone number, and complete delivery address. The address should contain the fields required for delivery, such as address line, city, state/province, postal/ZIP code, and country.

7.2 Order Summary

- Products and quantities.
- Product prices.
- Subtotal.
- Fixed shipping charge.
- Total amount.

- Selected currency.

7.3 Payment

The customer will provide payment information through the selected payment gateway. The exact payment gateway will be decided later, so the architecture should remain provider-independent where practical.

8. Shipping

- Use a fixed shipping charge.
- Admin can configure the fixed shipping amount.
- The charge is shown at checkout and included in the order total.
- The applied shipping amount is stored with the order.
- Complex shipping zones, carrier integrations, and dynamic rates are outside V1.

9. Order Management

9.1 Order Creation

- Store order ID, customer name, email, phone, delivery address, products, quantities, prices, subtotal, shipping charge, total, currency, payment status, order status, and date/time.
- Preserve the relevant price and order details at the time of purchase.

9.2 Order Status

Pending → Confirmed → Processing → Shipped → Delivered, with Cancelled as an applicable status.

9.3 Admin Order Management

- View all orders and individual order details.
- View customer information and delivery address.
- View purchased products, quantities, prices, subtotal, shipping, total, and currency.
- View payment status and transaction/reference information when available.
- Change order status and view order history.

10. Customer Accounts

10.1 Account Creation

Only the administrator can create customer accounts. Admin enters customer name, email, and password.

10.2 Customer Login

Customers with an account can authenticate using their credentials.

10.3 Account Features

- View account information.
- View order history and order details.
- Track order status.
- Make new purchases.

10.4 Guest and Account Purchasing

Both flows are supported: Registered customer: Login → Browse → Product/Cart → Checkout → Payment → Order.
Guest: Browse → Product → Checkout → Payment → Order. A registered customer may also purchase as a guest.

11. Customer Order Tracking

Orders are associated with the customer's email address. When an administrator creates an account using the same email address, the system can associate that customer's previous and future orders with the customer account according to the order-linking logic. Registered customers can log in to view their order history and current status.

12. Currency Management

- Support multiple currencies.
- Admin can add, edit, enable, and disable currencies.
- Admin can configure exchange rates and a base currency.
- Configured exchange rates are used to calculate displayed prices.
- The exchange rate/currency context applied to an order should be preserved so historical orders remain consistent when rates change.

13. Email System

- Order confirmation email after successful order placement.
- Payment confirmation email after successful payment confirmation.
- Order-status notification emails when status changes, including confirmed, processing, shipped, delivered, and cancelled where applicable.
- Customer account email when admin creates an account.
- Password-reset email flow for customers.

14. Admin Dashboard

14.1 Admin Modules

Dashboard, Products, Categories, Orders, Customers, Currencies, Exchange Rates, Shipping Settings, Payment information/status, and required email configuration.

14.2 Dashboard

- Total orders.
- Total customers.
- Total products.
- Sales/revenue.
- Pending orders.
- Recent orders.
- Other basic e-commerce statistics where useful.

15. Category Management

- Create, edit, and delete categories.
- Activate/deactivate categories.
- Assign products to categories.

- Allow customers to browse products by category.

16. Payment Management

- Record payment status for each order.
- Display order association, amount, currency, payment reference/transaction ID when supplied, and payment date/time.
- Specific payment provider will be selected later.

17. Security Requirements

- Secure customer authentication and password storage.
- Password reset and protected sessions/tokens.
- Customers can access only their own account/order information.
- Secure admin authentication and authorization.
- Only the Admin role can access administrative functionality.
- Sensitive payment-card data should not be stored directly unless explicitly required and supported by the selected payment provider.

18. Data Requirements

The system will maintain data for Admin, Customers, Products, Product Images, Categories, Orders, Order Items, Payments, Currencies, Exchange Rates, Shipping Configuration, and email/notification records where required.

19. Non-Functional Requirements

19.1 Performance

- Efficient page loading.
- Optimized product images.
- Minimal unnecessary API requests.
- Responsive interactions.
- Ability to handle normal e-commerce traffic efficiently.

19.2 Responsive Design

The website should work correctly on desktop, laptop, tablet, and mobile devices.

19.3 Maintainability and Scalability

The system should use a modular architecture so future functionality can be added without major restructuring.

20. SEO

- SEO-friendly product URLs.
- Product titles and meta descriptions.
- Appropriate heading structure.
- Search-engine-friendly product content.

21. Explicitly Out of Scope for V1

- Customer self-registration.
- Product variants.
- Product reviews and ratings.
- Wishlist.
- Complex shipping zones and dynamic rates.
- Shipping carrier integration.
- Multiple admin roles.
- Customer-created accounts.
- Blog system.
- Advanced loyalty/reward system.
- Advanced recommendation engine.
- Payment gateway selection at the SRS stage.

22. Future Enhancements

Possible future features include customer self-registration, product variants, reviews/ratings, wishlist, coupons, discounts/promotions, multiple admin/staff roles, shipping integrations, multiple payment gateways, recommendations, loyalty/rewards, advanced analytics, enhanced inventory management, and a mobile application.

23. Core User Flows

23.1 Guest Purchase

Homepage → Product Listing → Product Details → Buy Now/Add to Cart → Checkout → Name + Email + Phone + Delivery Address → Payment → Order Created → Confirmation Email

23.2 Registered Customer Purchase

Login → Browse Products → Product/Cart → Checkout → Payment → Order Created → View Order in Account

23.3 Admin Customer Creation

Admin Login → Customers → Create Customer → Enter Name + Email + Password → Customer Account Created → Account Details Sent by Email

23.4 Admin Order Management

Admin Login → Orders → View Order → View Customer + Address + Products + Payment → Update Order Status → Customer Email Notification

24. V1 Feature Summary

Module	V1
Product Listing / Details	Yes
Product & Category Management	Yes
Cart / Local Storage	Yes
Buy Now	Yes
Guest Checkout	Yes
Customer Address at Checkout	Yes

Module	V1
Admin-created Customer Accounts	Yes
Customer Login / Order Tracking	Yes
Order Management	Yes
Payment Integration	Yes*
Fixed Shipping	Yes
Multiple Currencies / Exchange Rates	Yes
Email Notifications	Yes
Admin Dashboard	Yes
Product Variants	No
Reviews / Ratings	No
Wishlist	No
Customer Self-registration	No
Multiple Admin Roles	No
Blog	No

* Payment integration is part of V1, but the specific payment gateway will be selected later.
